

M18.1 Solution Guide - Rule Correlation

The goal of this activity was to develop a correlation rule to assist with determining if a security-related event has occurred.

1. Create an alert when:
 - The protocol is HTTP.
 - The HTTP response code is not 200.
 - The source IP is from Beijing.
2. Create an alert when:
 - The protocol is HTTP.
 - The same source IP appears more than 50 times within five minutes.
 - This is an estimate and the true setting may be adjusted depending on past attacks.
3. Create an alert when:
 - The protocol is HTTP.
 - The response code is 200.
 - The resource contains .jpg in the file name.
 - The IP address is not from the United States.
