

Module 19 Day 1: Creating Dashboards

- You've built a radial gauge, pie chart, and geographic map.
- Next, your team would like to view all these data visualizations in a single location.
- Design a single dashboard to view all the visualizations in a single location.

Instructions

1. Design a dashboard that contains the previously created radial gauge, pie chart, and map.
2. Add a fourth visualization that contains a statistical report representing the data from the pie chart.
 - Place this report directly next to the pie chart.
