

Module 19 Day 1: Multiple-Value Visualization

- Your SOC staff are impressed with the radial gauge you designed to monitor attacks against the web server.
- They would like you to create a visualization that displays the exact URL paths targeted by attackers.
- Design a multiple-value visualization to display the URL paths targeted by the POST requests.

Instructions

1. Design an SPL query with the following fields:
 - `source="radialgauge.csv"`
 - `http_method=POST`
2. Add the top command to display the top 10 URI paths (`uri_path`).
3. Visualize the data in a pie chart.
4. Save your visualization as a report titled "Pie Chart – Top 10 URI_PATH."

Bonus

Test several other visualizations to see which of them might also be effective for displaying the top 10 URI paths.
