

Module 21 Day 1: Analyzing Ransomware with ANY.RUN

Solutions:

Pane 1: Desktop VM

- What appears on the user's desktop as the malware runs? **A ransomware screen that their files are encrypted and instructions on how to pay**
- How much is the user asked to pay? **\$300 worth of Bitcoin**
- How are they expected to pay? **Via Bitcoin to an address provided**
- How much time does the user have until the amount increases? **2 hours and 23 minutes**
- How much time does the user have until their files are lost? **6 hours and 23 minutes**

Pane 2: Details

- How many network connections do you see? **7**
 - What countries are they from? **France and Germany**
 - What are the ports/protocols? **137,138,443, 5355, 4051, 9001**
- How many files were modified? **1587**
- How many threats were identified? **5**
 - What is the name of the process identified as a threat?
taskhsvc.exe

Pane 3: Metadata

- What is the MD5 hash of the ransomware?
84c82835a5d21bbcf75a61706d8ab549
- What is the OS this malware was run on? **Win 7, 32 Bit**

- What are the mitre techniques and tactics used by this malware? **There are 18 techniques from 8 tactics, any can be listed**
 - Just document 3 - 4 of them.

Pane 4 - Processes

- View the wannacry executable process, and select “more info”
- What is the score and verdict of this process? **100 / Malicious**
- What username did the process run as? **admin**
- What are the steps the ransomware is executing? (Hint: view the right side of this page) **Steps start from WannaCry Ransomware is detected, and move through Drops the executable file immediately after the start**
