

Module 21 Day 3: Tagging the Evidence

Activity Introduction

In this activity, you will continue your role as a digital forensics investigator working on the Pure Gold Credit Union case.

- You regularly tag all evidence that you consider critical to the investigation.
- To speed up your work, you will use default and custom tags to categorize and organize all files and folders.
- This will allow other team members to sort through large amounts of data quickly and avoid duplicating effort.

Instructions

Create custom tags for evidence that you deem relevant to the case, such as mail, IPs, address book, and SMS.

- Use the [iPhone Forensic Image: Important Databases and Files](#) to select the content to tag.
- You can also bookmark and tag other files of interest.
