

Module 21 Day 4: Email Export

Activity Introduction

In this activity, you'll continue the role of digital forensic investigator.

- Your task is to export the email database for offline examination.
- You and the investigative team will use this offline email file to find additional incriminating evidence in an upcoming activity.

Instructions

1. Open your case file in Autopsy:
 - Open the recent case:
 - Case name: Pure-Gold-Credit-Union
2. A senior investigative team member has asked you to export the Mail folder for offline analysis:
 - Locate the Mail folder from the directory tree.
 - Note that extracting a directory uses the same method as extracting a single file.
 - Extract the directory to the Export directory located at `/home/kali/caseFiles/Pure_Gold_Credit_Union/Export`.
3. Verify the export:
 - Open a new terminal window.
 - Navigate to the Exports directory and `cd` into the Message Data directory.
 - Run `ls -l`. Take note of the multiple directories present.
 - `cd` into any of the directories and take note of the EMLX files.

You have successfully exported Peter's emails for offline analysis.

We will examine these emails in upcoming activities to establish Peter's involvement in this case and uncover the identity of any co-conspirators.
