

Module 21 Day 4: Peter's Email Evidence

Activity Introduction

In this activity, you will dig deeper into the iPhone image to find more information about Peter's involvement in the crime.

- You are tasked with viewing Peter's email correspondence and generating a list of contacts and their email addresses.
- You've already exported the email database for offline examination.
- You and the investigative team will use this offline email file to find additional incriminating evidence.

Instructions

1. Open your case file in Autopsy:
Note: Skip this step if the case file is already open.
2. Locate and view emails and attachments:
 - Open a new terminal window.
 - Navigate to the directory in Kali Linux that contains the Mail/MessageData folder.
 - Once there, perform the following tasks:
 - Using preview commands, open each file with the .emlx extension.
 - Scan through each email from top to bottom.
 - Look for email addresses and view the correspondence.
3. Document your findings in the [Correspondence Evidence Worksheet](#).
 - Fill out the following information:
 - Artifact numbers to help organize records
 - Timestamp (time email was sent or received)
 - Header information
 - These should include the individuals involved, their email addresses, and the subject line of the email.
 - Key information – Summary of the email content
 - Evidence location

4. Did you find any incriminating evidence inside any of the emails or attachments?
Summarize what you found.
