

Module 2 Day 1: Activity 12 ChatGPT In Cybersecurity

Activity Introduction

- Cybersecurity teams must constantly stay updated with evolving threats. Continuous training is essential, and tools like ChatGPT can provide interactive, real-time support and training.

Activity

Using ChatGPT, choose one prompt from each section and discuss the responses within your groups.

Scenario Simulations

- **Prompt 1:** "Let's simulate a ransomware attack. Imagine you receive a notification that your files have been encrypted and you are asked to pay a ransom to unlock them. How would you respond?"
- **Prompt 2:** "Let's simulate a social engineering attack. Imagine someone calls you pretending to be from the IT department and asks for your login credentials. How would you handle this situation?"

Explaining Key Concepts

- **Prompt 1:** "Explain the concept of 'Defense in Depth' and its role in cybersecurity."
- **Prompt 2:** "Explain 'multi-factor authentication' (MFA) and why it is important for protecting user accounts."

Interactive Q&A

- **Prompt 1:** "What are the best practices for securing a home network?"
- **Prompt 2:** "What should you do if you suspect your personal information has been compromised in a data breach?"

Be prepared to share your findings with the class.
