

Module 2 Day 1: Activity 03 Examining Accuracy and Bias in AI

Activity Introduction

- To effectively use AI for research, cybersecurity professionals need to be able to assess how accurate the data is and whether it is biased.
- In this activity, you will work in groups to evaluate news articles to assess the potential threats posed by AI.

AI in the News

Instructions:

Use the internet to conduct searches for recent news articles that demonstrate inaccuracy in AI responses.

As a group, discuss:

- How was the data acquired?
- What were the consequences of inaccurate or biased data?
- How could these consequences be mitigated?

Be prepared to share your answers.

Bonus:

Ask ChatGPT for recent news articles demonstrating inaccuracy and bias and compare the provided responses with the ones your group discovered. If ChatGPT provides links to the reports, be sure to verify the resources.

- Did ChatGPT discover different sources of bias?
- Were you able to verify the accuracy of ChatGPT's responses?
