

Module 2 Day 2: Activity 2 - Using AI/ML to Identify Spam

Activity Introduction

- Email programs often use AI to identify spam and malicious triggers in messages. As a cybersecurity professional, you might be called upon to generate phishing emails to test your employee's cybersecurity skills.
- As a penetration tester, it is important to be able to craft emails that will bypass AI/ML filters, so understanding what the system is looking for is a valuable skill.

Activity Instructions

You have received the three emails and they appear to be legitimate, but they could be malicious.

- For each of the messages, copy and paste the message into ChatGPT and add the following prompt: "Analyze the message and categorize it as legit or malicious and explain why."
- In your group, summarize the triggers identified by ChatGPT and discuss whether the messages are legitimate.
- Be prepared to discuss as a class.

EMAIL 1

Hi there, Bob

We noticed your recent purchases and are thrilled to invite you to our VIP Rewards Program! As a VIP, you'll enjoy exclusive discounts, early access to new products, and more. To join, simply click the link below and fill out a short form.

[Join Our VIP Club](#)

This invitation is tailored just for you and will expire soon. Don't miss out on this opportunity!

Cheers,

The Customer Care Team

EMAIL 2

Dear Bob Smith,

We've recently upgraded our online payment system and need you to update your payment information to continue enjoying seamless service. This is a routine check to ensure all transactions are secure and up-to-date.

Please use the link below to update your details at your earliest convenience.
