

Solution Guide: Oh Henry, What Did You Do?

- The first step is to navigate into the `students/oh_henry` folder on your virtual machine. To do so, run the following command:
 - `cd /03-student/day1`
- Navigate to Henry's folder:
 - `cd henry`
- There are many files in this directory. You can preview each file by using `head`, `more`, or `less`. For example, you could use either of the following:
 - `head do.txt`
 - `more do.txt`
- Most of the files contain non-ASCII data, as they are actually image files.
- The three files in each folder that contain text data are the following:
 - In Henry's folder: `do.txt`; `sp.txt`; and `wp.txt`
 - In Ruth's: `l8.txt`; `hy.txt`; and `ud.txt`
- Delete the other files:
 - `rm dj.txt bb.txt b7.txt sd.txt ta.txt`
- Confirm that only the correct files remain in Henry's folder by running the command: `ls`
 - The files that should remain are `do.txt`; `sp.txt`, and `wp.txt`.
- Complete this same process in Ruth's folder.
 - The files that should remain are `l8.txt`; `hy.txt`, and `ud.txt`.

Bonus

- To view the date on the bottom of each file, run:
 - `tail do.txt`
- On the bottom of the file, called `do.txt`, is the date October 13, 2019. To rename this file, run:
 - `mv do.txt do.txt_10_13_2019`
- Follow this same process for all the files.
- The final results for Henry should be as follows:
 - `do.txt_10_13_2019`
 - `sp.txt_10_14_2019`
 - `wp.txt_10_15_2019`
- The final results for Ruth should be as follows:
 - `l8.txt_10_13_2019`
 - `hy.txt_10_14_2019`

- ud.txt_10_15_2019
