

Module 3 Day 3 Activity File: Gather Evidence

- In this activity, you will continue in your role as a security analyst at Candy Corp.
- Candy Corp believes it has enough evidence to send to the authorities to charge Sugar Corp with a cyber crime.
- Your task is to gather several points of evidence from your file systems that can be provided to the authorities to prove Sugar is stealing data.

Instructions

Using only the command line, continue to complete the following tasks in the `/03-student/day2/Gathering_Evidence` folder in your Ubuntu virtual machine:

1. In the `Gathering_Evidence` folder, make a directory called `Sugar_evidence`.
2. The `email` directory contains an archive of emails from the employees.
Place the following data in a new file, called `sugar_email_evidence`:
 - A list of emails referencing Sugar
 - The number of emails referencing Sugar
 - **Hint:** Use the pipe and redirection command to append the additional data to this file.
3. The `web_logs` directory contains an archive of web log access by date for PeanutButtery.net. The IP of Sugar, which is a numerical number that identifies an address on the network, is `13.16.23.234`.
Place the following data in a new file, called `sugar_web_evidence`:
 - The web log data that contains the IP address of Sugar
 - The number of times Sugar's IP is found in this file
4. Move the two new evidence files into the directory, `Sugar_evidence`.
5. Combine them both into a single file, called `Sugar_evidence_for_authorities`.
