

Module 3 Day 3 Activity File: `grep`

- You will continue in your role as a security analyst at Candy Corp.
- Your manager now needs to know which of the secret recipes include guavaberries.
 - Even if Sugar Corp was able to obtain the secret recipe, they won't be able to produce the candy, since Candy is the sole owner of the guavaberry plant.
- Your task is to determine which of the secret recipes contain guavaberries in the list of ingredients.

Instructions

Using only the command line, continue to complete the following tasks in the `/03-student/day2/finding_your_way/` folder in your Ubuntu virtual machine:

1. Navigate back into the `PeanutButtery.net` directory that contained the secret recipes.

Hint: Remember, by default `grep` does not search subdirectories, so make sure you are in the directory with the secret recipes.

Bonus: Search the `man` page for `grep` to find a way to search subdirectories.

2. Find all recipes that include the word "guavaberries" in their list of ingredients.

Bonus

Your manager realizes that some of the recipes require guavaberries as **optional**, and is now concerned Sugar Corp can still make these secret recipes.

- Compose a single command to find all the files that have the word "guavaberries" OR "optional" in the recipe.
