

Solution Guide: Users, Groups, and Password Policies

In this activity, you used the `net` tool to find information about user groups and password policies, and append them to your report.

Solution

Start by using `cd` to return to the `Desktop/reports` directory.

1. Enumerate users with `net`:
 - Run `net user >> report.txt`.
2. Find `Alex`'s password status:
 - Run `net user Alex >> report.txt`.
3. Find groups on the machine:
 - Run `net localgroup >> report.txt`.
4. Find the current password policy:
 - Run `net accounts >> report.txt`.
5. Run `type report.txt` to see the updated report.
