

Module 2 Day 2: Activity 1 Identifying Virus Threats

Activity Introduction

- Knowing that you have a potential virus is only part of identifying the threat to an organization.

Activity

- One of the current threats for ransomware is a virus called “Lockbit 3.”
- Using ChatGPT, use the following prompt: “summarize how Lockbit 3 works and what are its effects.”
- Then, use the following prompt: “How do you mitigate this malware?”

Note: Different users might get different responses.

- Using the internet and ChatGPT, research 3 other common viruses and analyze them.
- Discuss in your group which of the three was most critical to mitigate against and why.
- Be prepared to report out.

Bonus

- Using the internet, look up recent ransomware attacks and try to determine what virus was used and research how it works and mitigation techniques.
