

Module 3 Day 1 Activity File: Find your Milky Way

- You will continue in your role as security analyst at Candy Corp, investigating the employee potentially selling secret recipes to Sugar Corp.
- Your manager at Candy Corp needs you to create an additional directory, as they believe there is a second employee working with Sugar Corp.
- You must also copy and move several of the evidence files after creating this new directory.

Instructions

Using only the command line, continue to complete the following tasks in the `/03-student/day1/take_5` folder in your Ubuntu virtual machine:

1. Create an additional folder called `Internal_Investigation_Employee_B`.
2. Using absolute paths, move the file `email_evidence` from `Internal_Investigation_Employee_A` to `Internal_Investigation_Employee_B` because you have been told there won't be email evidence for the first employee.
3. Using absolute paths, copy the file `log_evidence` from `Internal_Investigation_Employee_A` to `Internal_Investigation_Employee_B`, as you have been told there will likely be log evidence from both employees.
4. Check your directories to confirm the files are all in the correct locations.
