

### Solution Guide: Take Five and Practice the Command Line

- First, navigate into the `/03-student/day1/take_5` folder on your virtual machine. To do so, run the following commands:
  - `cd /03-student/day1/`
  - `cd take_5`
- Create a folder called `Internal_Investigation_Employee_A`:
  - `mkdir Internal_Investigation_Employee_A`
- Confirm that the folder was created:
  - `ls`
- Navigate into `Internal_Investigation_Employee_A`:
  - `cd Internal_Investigation_Employee_A`
- From within the `Internal_Investigation_Employee_A` folder, print the working directory to confirm that you are in the correct location:
  - `pwd`
- This should display:

Python

```
/03-student/day1/take_5/Internal_Investigation_Employee_A
```

- Create three files inside the `Internal_Investigation_Employee_A` folder: `email_evidence`, `log_evidence`, and `web_evidence`:
  - `touch email_evidence log_evidence web_evidence`
  - We created three files with one command by putting a space between each of the file names, but we could also create them one at a time.
- Delete the file called `web_evidence`:
  - `rm web_evidence`
- Display (list) all the files created:
  - `ls`
- The two files that display are as follows:

Python

```
email_evidence
```

```
log_evidence
```

- Lastly, clear the terminal window:
  - `clear`
