

Cd ..Module 3 Day 2 Activity File: Internal Investigation—Find the Kit cat Burglar

- You continue in your role as security analyst at Candy Corp, investigating the employees potentially selling secret recipes to Sugar Corp.
- Your manager at Candy Corp has collected some additional files from Henry and Ruth's computers to help you build your case against them.
- Your manager wants you to analyze this additional data and prepare a combined evidence file for the local authorities.
- You must act fast, so the secret recipes don't get into the hands of Sugar Corp.

Instructions

Go to the following directory to complete the activity: `find_kit_cat_burglar`.

Within this directory, there are subdirectories for Ruth and Henry.

1. Navigate through these directories and find all the files that can be considered evidence of Henry and Ruth's crimes.
2. Make a new directory called `Evidence_for_authorities` within the `find_kit_cat_burglar` directory.
3. Copy all the evidence files into the `Evidence_for_authorities` folder, then concatenate the files into a single file, called `Candy-evidence.txt`. This will be provided as evidence to the local authorities.

Bonus

Four of Ruth's TXT files are not actually text files but secret pictures.

- Find the files and change the file extensions to an image extension.
 - **Hint:** Preview the files to find the ones you're looking for.
 - **Hint:** Try using the `file` command to see what the file type actually is.
- Open each file with an image program and note what is in the picture.
 - **Hint:** Try opening files from the command line with `gimp <file_name>`.
