

Activity File: Let's Talk to John

In this activity, your senior administrator has asked you to audit the strength of users' passwords by using the `john` program and document any passwords that you find. To complete these tasks, you will use the program `john` the ripper on the password file you viewed from Day 1. You will use `john` to crack the passwords for several users on the system.

Instructions

1. Make a copy of the `/etc/shadow` file in your `/home/sysadmin` directory. Name the copy: `"shadow_copy"`.
 - Note: Don't forget to use `sudo`!
2. Use `nano` to edit your `"shadow_copy"` file to leave only the rows for the following users to crack:
 - Jack, Adam, Billy, Sally, Max
3. Run `sudo john shadow_copy`.
 - Note: This command is all you need to crack passwords.
4. This will take some time, but let John the Ripper run, and take note of any passwords you find.
