Linux Scavenger Hunt

Lesson 6.3

Let's Get Ready for a **Linux Scavenger Hunt**

Challenge

You will be completing a capture the flag (CTF) scavenger hunt using a pre-configured, headless (GUI-less) Linux Scavenger server.

Setting up the headless server:

Once running, you can ssh directly into the target machine.

CTF Instructions and Rules

01

You can work alone or in teams.

02

If working with a team, all members must participate equally.

03

To complete this CTF, you will launch a headless VM and log in.

04

You can use all previous material and internet resources.

05

While each member can work on different steps, most steps must be completed in order.

06

Professors and TAs will not be providing hints or assistance unless there are technical issues that prevent the VMs from running correctly.

Hints

- 1 Take note of anything interesting that you find.
- 2 Each flag has the following format:
`flag_1:97df27aec8c251503f5e3749eb2ddea2`
- 3 There are eight flags in total. The first seven flags will be combined to create the final flag.
- 4 Copy down any credentials you find. You may need to use them later.
