

Activity File: Task Scheduling

Your CIO wants to schedule reports to be created on a daily basis. This system isn't remotely managed at the moment, and with a new developer coming in, huge changes might be made to the machine's configuration.

- This will help reduce workstation development drift for any new users for the Windows environment, and for this specific developer position and project.
- Your CIO has tasked you with using the GUI tool Task Scheduler to create a task that will run each day.

Continue using the Windows RDP host machine.

Instructions

1. Use the user, `azadmin`, to create a newly scheduled task.
2. Launch the Task Scheduler GUI application from the Start menu.
3. Create a new task.
4. Navigate to the scheduling section.
5. Schedule the task to execute every day.
6. Make sure the time is set to execute after a minute or two from your current time (so that we can make sure it executes properly).
 - Save your changes to the schedule.
