

Cybersecurity

Hardening your Linux Server's System Settings

Lesson 10.2

Welcome

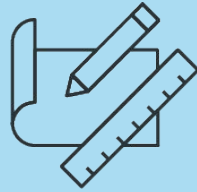

Learning Objectives

Today's lesson will cover:

1 A brief overview of project tasks for Day 2.

2 Project work.

Day 2 Project Overview

Day 2 Tasks

Steps you will be working on today:

- Auditing and securing SSH
- Reviewing and updating system packages
- Disabling unnecessary services
- Enabling and configuring logging

Day 2 Tasks

Auditing and securing SSH

SSH is a common method attackers use to breach linux servers.

You will harden SSH with strict controls.

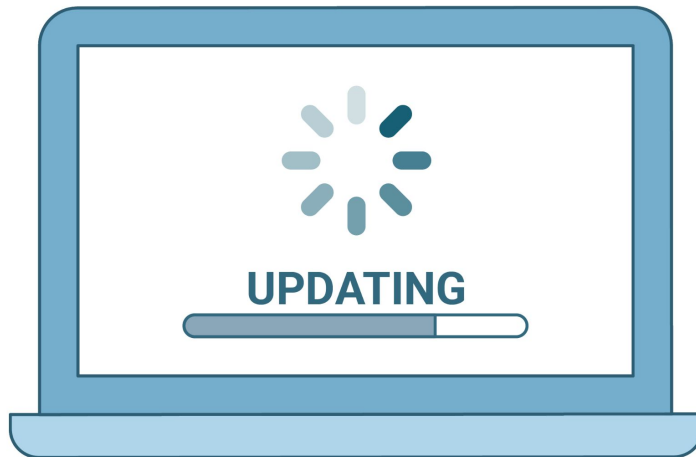

Day 2 Tasks

Reviewing and updating system packages

Today you will be reviewing and updating The Baker Street Corporation (BSC)'s system packages.

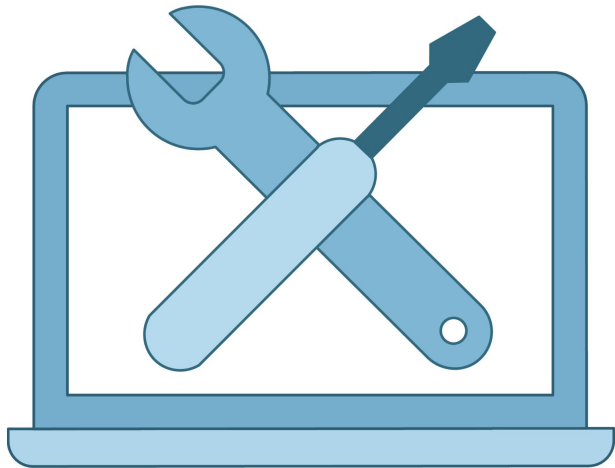

Having the latest version of packages minimizes security risks.

Day 2 Tasks

Disabling unnecessary services

Having unnecessary services running on a server increases the attack surface.

You will review and disable any of BSC's unnecessary services.

Day 2 Tasks

Enabling and configuring logging

Logging is a crucial part of the hardening process that can help identify:

- Suspicious network activity
- Unauthorized access
- Other anomalous activity

Application Number of events: 20,896

Questions?

Activity

Hardening your Linux server

For the remainder of today's class, you will work on completing Day 2 project tasks.

- While you are responsible for completing your own project you can ask classmates, the TA, or the instructor to assist if you have any questions.
- **Remember** to complete the checklist document as you progress through the activities.

Suggested Time
Remainder of class

Time's Up!
