

Module 18 Day 1: Monitoring Assets

Activity Instructions

In this activity, you will play the role of a newly hired SOC manager at Omni Medical Products (OMP), an online company that supplies medical products to hospitals.

- OMP has recently experienced several security-related events but has never had a SOC to handle the issues.
- OMP has hired you as a SOC manager to design a SOC.
- While you would like to monitor all types of security events, OMP can only afford to monitor certain event types.
- Your first task is to analyze the types of security events OMP has experienced and rank them based on risk to the organization.
- This ranking will help you later determine which events to monitor.

Instructions

1. Rank the following security events from 1–8 based on the estimated risk they pose to OMP.
 - One is the highest priority and eight is the lowest priority.
2. Provide a brief summary of how you chose the highest and lowest ranked events.
 - Note that as the new SOC manager, you are the authority on assessing these events. As long as you thoughtfully and effectively explain your reasoning, your supervisors should agree with you.
 - In other words, there is not one correct order, only a correct explanation for why you choose an order.

OMP Security Events

- A. ____ An employee in the Omaha office recently downloaded ransomware from a phishing email onto their work laptop.
- B. ____ The primary web server in the New York office briefly experienced an outage due to a DDoS attack.
- C. ____ The administrative application website occasionally experiences brute-force attacks.
- D. ____ Vendors were inadvertently provided physical access to the data center in the Atlanta office.
- E. ____ A terminated employee was not removed from the active directory and has continued to log into their account.
- F. ____ SQL injection attacks were attempted on the primary purchasing web application.
- G. ____ Last month, an inventory database audit log ran out of disk space and stopped writing.
- H. ____ In the last several weeks, the VPN logs showed a source IP coming from Asia, where no employees are located.
