

Module 18 Day 1: What is this Log Activity

Activity Instructions

You are a recently hired SOC manager at OMP.

- One of your first tasks as SOC manager is to understand the types of logs available for monitoring.
- Your predecessor left you with a directory labeled `logs` containing various log files.
- Unfortunately, there is no indication of what each log type is for. You must analyze and categorize each log.

Instructions

1. Analyze the five raw log files provided.
2. Determine the type of each log file and note your reasoning.
 - Hint: Look for keywords or phrases in each log file to determine the type of log.
3. Provide a brief summary of the security events that each log file identifies.
