

Module 18 Day 2: Searching Fields with Splunk

Activity Instructions

- Your manager at OMP is concerned with suspicious user activity on the Windows servers.
- Several OMP users are being locked out and deleted.
- You have been tasked with creating several complex SPL queries by selecting fields in your Splunk search.

Instructions

1. Load and open the Windows logs in your Splunk search, specifically the logs named: `winevent_logs.csv`.
 - Note: There are several Windows logs. Make sure you are selecting the correct one: `winevent_logs.csv`.
2. Select fields to design SPL queries that pull the following data: (Hint: Check the name field for activities.)
 - Logs for when a user was locked out
 - Logs for when a user account was deleted
 - Logs for when a user was locked out and on the `dest_nt_domain` of `Domain_B`
 - Logs for when a user account was deleted and on the `dest_nt_domain` of `Domain_B` on Tuesday
3. Run the searches and note how many events are returned.

Bonus

- Create an SPL query to determine the type of user activity for the EventCode of 4738.
