

Module 18 Day 2: Splunk Features

Activity Instructions

In this activity, you will play the role of SOC manager at Omni Medical Products (OMP).

- Your CIO has decided that you will use the Splunk product for your security monitoring.
- You have been tasked with analyzing Splunk's add-ons and apps to determine if any of them will work with your security products.

Instructions

1. Using the Splunk apps search, research which add-ons and apps can be used to monitor the security products below.
Provide a brief summary of the benefits and services provided by each add-on application.
 - Barracuda Spam and Virus Firewall
 - Fortinet IDS
 - AWS Web Application Firewall
 - ZScaler
2. Determine if any tools can assist with NIST 800-171 compliance.
