

Module 18 Day 3: Splunk Warm Up

Activity Instructions

In today's activities, you will continue your role as SOC manager at OMP.

- Your Networking team noted suspicious activity and pulled logs from their Fortinet IPS system for you to investigate.
- You are tasked with analyzing the logs, determining the issue, and offering any mitigation strategies.

Instructions

1. Upload the provided log file: `fortinet_IPS_logs.csv`
2. Determine the top source IP address.
3. Determine the primary attack name in the logs.
4. Answer the following questions: (Use Google to assist in your research.)
 - Fortinet logs are from which type of device?
 - What is the city and country of the top source IP address?
 - Provide a brief summary of the attack name found.
 - What is a recommended mitigation strategy for this attack?
