

Activity File: Threat Modeling Step 5: Risk Analysis

In this activity, you'll use the threats you identified in the previous activity to complete a quantitative risk assessment.

- You'll populate a spreadsheet with the identified risks and use it to generate a risk matrix and heat map for GeldCorp.

Risk Template

Access the spreadsheet here:

- [Risk Analysis Template](#)

Complete this activity using Google Sheets.

Note: When you click on the link, you will be asked to make a copy.

You can access the following tabs at the bottom of the document:

- Risk Assessment Heat Map: Contains descriptions of each risk, as well as likelihood and impact ratings
- Dropdown Keys: Provides information on GeldCorp's risk rating guidelines

Instructions

1. In the Risk Assessment Heat Map tab, add the most critical risks you identified in the previous activity.
 - Input the risk description, likelihood, and impact cells for each risk.
2. Next, consider less critical risks. Add at least five additional risks that are medium or high impact, but are not very likely.
3. When you have at least ten risks, Review the heat map and take a moment to assess Geldcorp's risks.
4. Answer the following questions:
 - Which risks should you mitigate?
 - Which risks should you manage?
 - Which risks should you monitor?
 - Do these results align with your expectations?
