

Activity File: CEO Interviews

In this activity, you will play the role of a security consultant for a new online auction company, E-Auctions.com.

- You are tasked with determining E-Auctions.com's security posture before it launches its business later this year.
- You'll accomplish this by conducting an interview with the CEO of E-Auctions.com. Your instructor will play the role of CEO.
- You and your classmates will each develop one question and then take turns asking the CEO about E-Auctions.com's security posture.

Resources:

- [NIST Framework for Improving Critical Infrastructure Cybersecurity Core](#)

Instructions

1. You will be assigned a number between 1 and 22. This number will correspond to a NIST category.
 - You must develop one question relevant to the NIST category you are assigned.
 - Use the NIST document above to learn about your category and subcategories.
 - For example, if you are assigned number seven, you must draft a question related to NIST Category 7: Awareness and Training.
 - In the NIST document, you would navigate to Category 7: Awareness and Training.
Subcategories include:
 - 1: All users are informed and trained.
 - 2: Privileged users understand roles and responsibilities.
 - 3: Third-party stakeholders (e.g., suppliers, customers, partners) understand roles and responsibilities.
 - 4: Senior executives understand roles and responsibilities.
 - 5: Physical and information security personnel understand roles and responsibilities.

- A question related to Subcategory 1 (All users are informed and trained) could be:
 - "Do you have a security awareness program for your employees? If so, are all employees trained and what topics are covered?"
 - Your question should only be within the category you were assigned.
 - Be creative with your question. Make sure it requires more than a simple yes or no response.
2. Ask the CEO (your instructor) the question to determine if E-Auctions.com is secure or has potential vulnerabilities it must address before opening.
