

Module 23 Day 2

Activity File: Technical Interviews

- In this activity, you will practice situational interview questions with your partner.
- You will have time to prepare your answers. Then, you will take turns reciting your answers and providing feedback.

Instructions

1. Read the following situational technical interview question:
You work at a finance organization that has an application that allows customers to trade stocks. An anonymous caller leaves a voicemail claiming they found a major SQL injection vulnerability on the login page for this application. They do not leave any other details or a return phone number. What steps do you take to address this message?
2. Use the following structure to craft your response:
 - Restatement
 - Conceptual solution
 - Technical steps
3. Present your answer to your partner, and provide feedback on your partner's answer.
