

Module 12 Day 2: 07 Security Onion and NSM

Solution Guide: Security Onion and NSM Overview

The goal of this activity was to reinforce concepts related to network security monitoring and Security Onion.

Note: The answers will depend on the alert you chose.

1. Pick any alert of your choice then answer the following questions:
 - What is the alert status?
 - What are the source and destination IP addresses?
 - What are the source and destination ports?
 - What is the alert ID for the alert that you chose?
2. Define the Snort rule that triggered the alert you chose:
 - Action:
 - Protocol:
 - Source IP:
 - Source Port:
 - Direction:
 - Destination IP:
 - Destination Port:
 - Message:

Bonus Questions

True or false:

1. NSM is vulnerability-centric, with its primary focus on the vulnerability and not the adversary.
 - False
2. The strength of NSM is its focus on the visibility of an attack, not its control.
 - True
3. NSM can see inside encrypted traffic.
 - False
4. Alerts in the Security Onion Console are the equivalent of an Indicator of Attack, or IOA.

- True
- 5. NSM provides organizations with the capability to track and uncover malware.
 - True
- 6. The Suricata IDS engine drives much of the functionality of the Security Onion analyst's console.
 - True

Answer the following questions:

1. Name two methods for physically connecting an IDS to a network.
 - Network TAP or SPAN (mirrored port)
2. Name the two stages of NSM and their processes.
 - The first stage is Detection. Its processes are Collection and Analysis.
 - The second stage is Response. Its processes are Escalation and Resolution.
