

Module 18 Day 1: Log Aggregation and Normalization

Activity Instructions

You will continue to play the role of SOC manager at OMP.

- Your CIO would like you to focus on monitoring web server logs, as OMP has recently experienced DoS attempts.
- Each web server logs data in a different format. You must aggregate and normalize the logs by identifying the various fields in the log files.

Instructions

You have been provided one log record from each web server to help you normalize the logs.

Identify the various fields from each log record. The fields include:

- Date
- IP
- Resource Requested
- User Agent
- HTTP Response Code
- File Size
- Protocol and Version

Hint: Use Google to research the fields you aren't familiar with.
