

Activity File: Network Devices

In this activity, you will continue to play the role of a security analyst at Acme Corp.

- Acme Corp just opened a new office in Shanghai, China.
- Acme Corp has a list of employee computers and network devices to have in the Shanghai office.
- Your task is to design the network layout for the Shanghai office using draw.io.
- Additionally, you need to add network security devices to the design to protect against a network attack.

Instructions

1. Open draw.io and start a new project called "Shanghai Office."
 - Within draw.io, remember there is a field on the top left called "Search Shapes". Simply search for your devices here (e.g. routers, firewalls, and servers).
2. Design the office with the following computer and network devices:
 - (6) Employee computers
 - (2) Switches
 - (1) Router
 - (1) Load balancer
 - (1) Firewall
 - (1) Representation of the internet
 - (2) Servers
 - (1) Wireless access point with (1) firewall to protect it

Bonus

3. Create a DMZ.
4. Use lines to separate the DMZ, LAN, and WAN.
5. Add the server and load balancer to the DMZ and place the rest of the devices in appropriate locations.
