

Module 8 Day 3 : Analyze TCP Traffic

Activity File: Analyze TCP Traffic

In this activity, you will continue to play the role of a security analyst at Acme Corp.

- CompuCom, a software company, hires Acme Corp to do a security assessment of its network.
- CompuCom requests that you analyze a new employee's TCP traffic to determine what they worked on in their first week.

Instructions

1. Open the packet capture provided and filter out for TCP activity.
 - [New Employee TCP Packet Capture](#)
2. Find all the TCP handshakes for establishing a connection.
3. Find any TCP terminations.
4. Use your findings to determine what the employee did in their first week of work.
 - Hint: Try to determine what websites were visited.
 - Hint: If the IPs aren't being resolved within Wireshark, use the following website to look up the domains that the IPs are connected to:
<https://mxtoolbox.com/ReverseLookup.aspx>

NOTE: IP addresses change often as organizations move into the cloud. If the IPs do not resolve, it is likely that the servers have moved since the capture.
