

Solution Guide: Network Devices

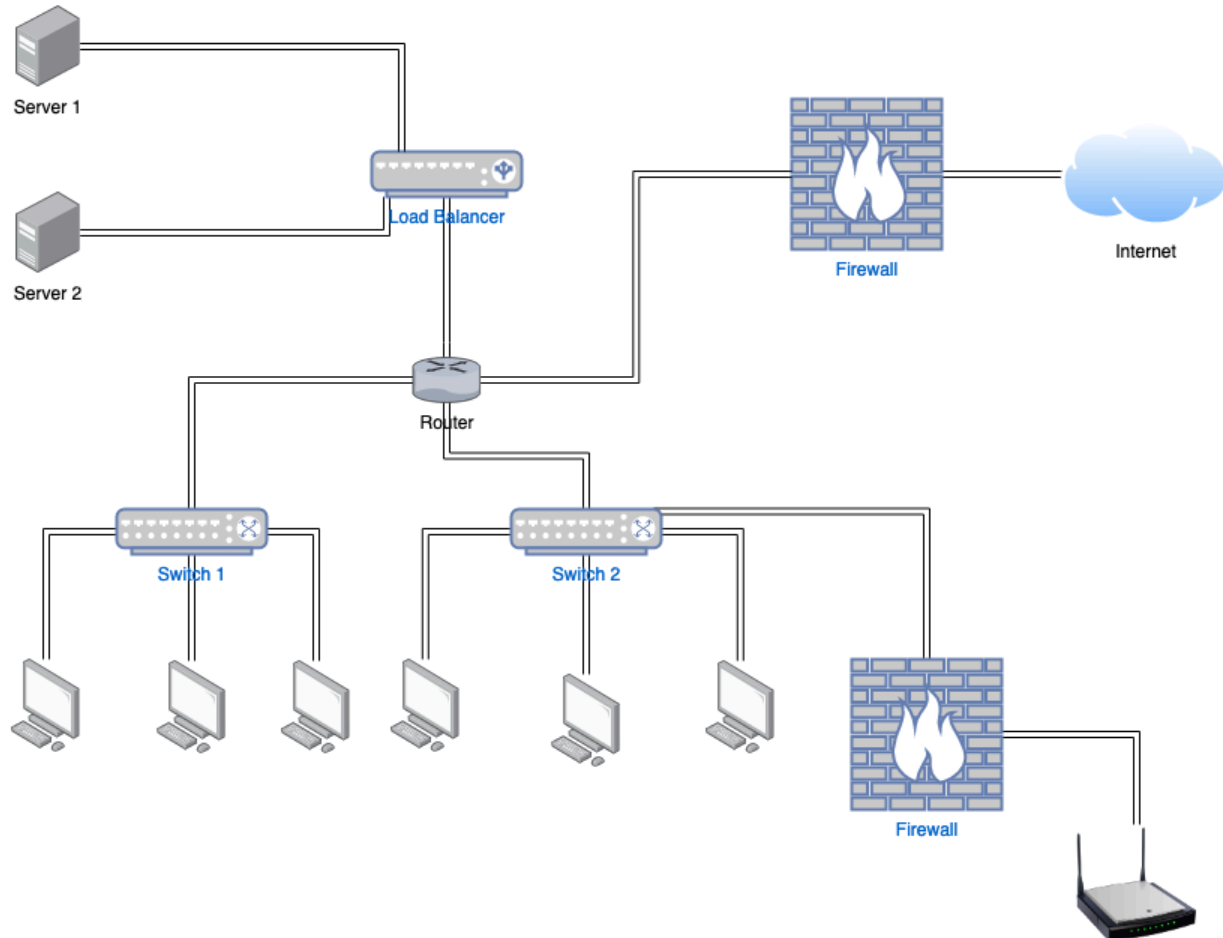

To complete this activity, you had to design a network layout for the new Shanghai office using draw.io.

The following solution is a general guideline. There are many ways to design the Shanghai network with the required devices. Use the following as a guide for reviewing your design.

It's important that your design includes the following characteristics:

1. The internet is protected by a firewall.
2. The load balancer is placed after the firewall.
3. The switches come after the router.
4. The computers come after the switches.
5. The servers can be placed in many places, as long as they are behind the load balancers.
6. There is a firewall between the wireless access point and the network.
7. The firewall for the wireless access point connects somewhere in the network (behind the router).

ShanghaiOffice, v1

Bonus

Add the following:

9. Add a line indicating the separation of the DMZ, LAN, and WAN.
10. Place devices in their appropriate areas.
