

## Solution Guide: Network Security

To complete this activity, you had to:

- Review the three scenarios of suspicious activity.
  - Document the client and server and describe the request and response in simple terms.
- 

### Scenario 1

A hacker logs into Microsoft Outlook with the stolen username and password of Acme's CFO. The hacker sends an email to the head of accounting asking them to wire \$10,000 to a foreign account owned by the hacker.

- Client: Microsoft Outlook
- Server: Email server or the mail exchange server
- Request: Send the email
- Response: Confirmation from the exchange server that the email is received

### Scenario 2

A hacker uses Firefox to visit the administrative website of Acme Corp, where they attempt to log into the CFO's account multiple times until they correctly guess the password.

- Client: The browser, Mozilla Firefox
- Server: The web server hosting the administrative webpage
- Request: Attempt to log into the admin site
- Response: Login attempt is accepted or denied

### Scenario 3

A hacker steals the Acme CFO's mobile phone. Login credentials were saved on the phone, allowing the hacker to log into Acme Corp's mobile admin application.

- Client: The mobile admin app on the mobile phone
- Server: Web application hosting the data, which the app is pulling from
- Request: Attempt to log into the mobile admin application
- Response: Login attempt is accepted or denied
