

Solution Guide: Ports

The goal of this exercise was to introduce you to ports and demonstrate that each protocol is assigned a specific port number.

Completing this activity required the following steps:

- Opening the log file to view the various log records
- Determining the source and destination port for each log record
- Determining the protocol for the associated destination port
- Determining what kind of activity may be occurring based on the protocol

When you open the log file, you see the source and destination port in each record. It resembles the following example:

Src Port: 50152, Dst Port: 80

Log Record 1

- Source port: 50152
- Destination port: 80
- Destination protocol: HTTP
- Protocol summary: Sally Stealer is likely accessing an unencrypted website.

Log Record 2

- Source port: 53367
- Destination port: 443
- Destination protocol: HTTPS
- Protocol summary: Sally Stealer is likely accessing a website with encrypted traffic.

Log Record 3

- Source port: 64836
- Destination port: 21
- Destination protocol: FTP

- Protocol summary: Sally Stealer is likely using FTP to transfer files.
