

Module 11 Day 2: Cryptography

Activity File: Cryptography Refresher

In this activity, you will use your key and IV that you had created in the previous class and saved into a file called `key_and_IV`.

- You will continue to act as a security analyst working for the Hill Valley Police Department.
- Captain Strickland has moved a meeting to 6pm and would like you to notify your partner of this change.
- As secrecy is still critical, your task is to write an updated message and encrypt it with OpenSSL.
- Next, send the encrypted message to your partner with your key and IV (initialization vector), and decrypt the message you receive from your partner.

Instructions

1. Choose a partner, preferably the same partner as in the previous class.
2. Write an updated message using your code name, indicating the meeting is now at 6pm at Lou's Cafe.
 - Encrypt the message with OpenSSL.
 - Send the encrypted message to your partner with the key and IV.
 - Once you receive your partner's encrypted message, key, and IV, decrypt it with OpenSSL.
3. After decrypting your partner's message, answer the following questions:
 - What method did you use to transfer the key and IV?
 - Is this a secure method for transmitting the key and IV? Why or why not?
